Turtle Ship Third floor Deck

Edible water and fire water:
Keg for edible water and fire water in consideration of the characteristics of wooden ships.

Commanding Room:
Space where the captain (admiral) of the turtle ship stayed to command the maneuvering

Anchor mast supporter:
The anchor of the turtle ship used several wires that would be required to have the facilities to fasten all of them at once.

Furnace to ignite the guns:
The furnace is installed around the guns for easily lighting on the wicks of the guns.

Dragon head:
By contemplating the record that the guns were fired from the mouth of the dragon head at the time of the Imjin War, it is estimated to have the dragon head horizontal with the deck.

Scul:
The scull unique in Joseon was used to move the ships back and forth or rotate its own position

Anchor mast:
This is the device to secure the anchor along with the mast for supporting the anchor.

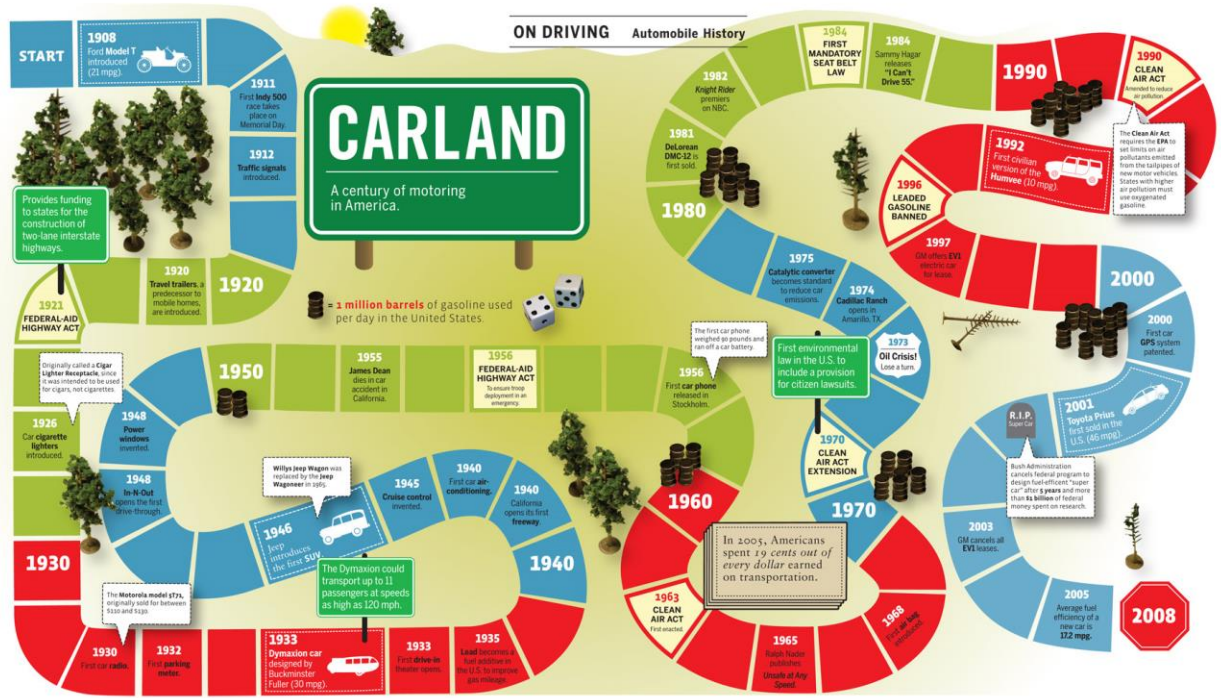

Gun:
It is possible to fire by using established for all directions on the moving ship.

CATEGORIES: BUSINESS & MONEY

IT'S THE ECONOMY, STUPID!

The dollar is weak. Food and oil prices are high. Our nation is spending well beyond its means and owes trillions of dollars in debt to foreign governments. What most of the gloom-and-doom reports don't provide, however, is perspective—a historical survey of an economy that's been through more than a few ups and downs in its day. Here's a farsighted view of how our temperamental economic machine works, and a close-up of how it stands today. **KEY DEFINITIONS**

THE NATIONAL DEBT
This is the total outstanding amount that our federal government has borrowed up to the present day. To borrow money the U.S. Treasury issues securities such as bills, notes, and savings bonds to individuals, corporations, and foreign, state, and local governments.

in actual dollars, U.S. Treasury figures

GROSS DOMESTIC PRODUCT
The GDP is a way to understand the size of a country's economy. It's the dollar value of the total goods and services that the nation's population produces. It is usually calculated by adding up everything the population spent plus the country's net exports. By tracking GDP over time we can evaluate the health of the economy.

INFLATION-ADJUSTED DOLLARS
Figures shown in the money value of a particular time in the past.

ACTUAL DOLLARS
Figures shown in the money value of a particular time in the past.

STOCK INDICES
The Dow Jones Industrial Average (the Dow) is an index that tracks the stock prices of 30 prominent companies. The Standard & Poor's 500 (the S&P 500) is an index that tracks the stock prices of 500 large American companies.

RECESSION
A recession, also called a "dip," is generally defined as two quarters of slow or negative GDP growth. The technical definition, used by the National Bureau of Economic Research, a private nonprofit research organization, is when economic factors such as GDP, income, employment, industrial production, manufacturing, and sales significantly decline over the course of more than several months.

STAGFLATION
A term first used in the 1970s for simultaneous inflation and stagnation—a prolonged recession—two phenomena that were thought to be mutually exclusive before that time.

THE BUSINESS CYCLE
A cycle is a period of economic growth or expansion, with a **DEPRESSION** or recession, or a long-term cycle of economic contraction. From 1854 to 1945, the typical boom or bust lasted 23 months. Since World War II, expansions have averaged 50 months and contractions have averaged 11 months.

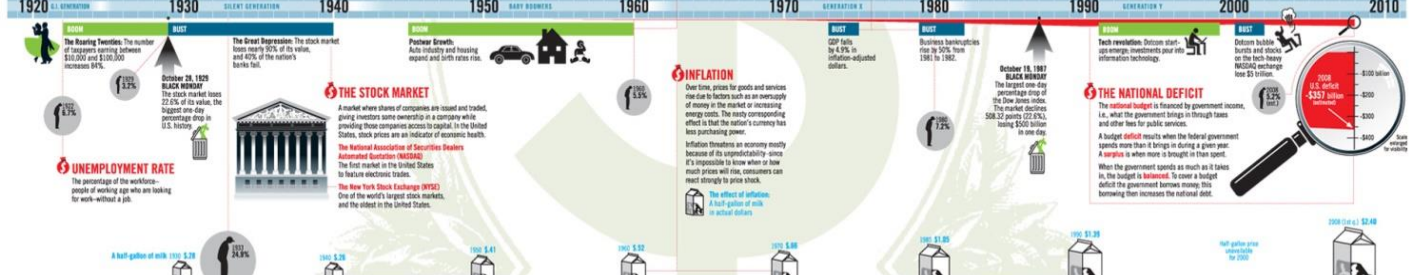

WHO OWNS AMERICA?
A big chunk of the national debt—about 28%, or \$2.6 trillion—is held by foreign governments. Top five foreign holders of treasury securities from largest to smallest: Japan, China, the United Kingdom, oil-exporting "BRIICS" (Brazil, Russia, India, Indonesia, South Africa, Italy, Korea, Greece, Spain, Saudi Arabia), the United Arab Emirates, Qatar, Kuwait, and Norway.

FEDERAL DEBT
The federal government doesn't follow the same accounting practices it requires corporations and state and local governments to follow. If it did, the national debt would actually be \$28.1 trillion.

U.S. Citizens
U.S. citizens were to pay down the national debt today if we had our money received approximately \$14.8 trillion.

HAYES AND HAVE-NOTS In 1900, the median annual income for Americans aged 15 and older was \$14,770. The Congressional Budget Office projects that 29 million American households will need food stamps in 2009—up from the program's 1994 record for participation. 43% of American households spend more than their own monthly income on "checkbook paychecks" in 2007, up from 37% in 2006. The average American household has \$9,581 in credit card debt, which is 15% higher than it was in 2005. Approximately 42% of American households are making "savings" to support "homework" for three months.
